- appex on which the steel mills are located. These mills are equipped with two sets of Siemens-Martin as well as with electric ovens with the complete equipment required to produce an average of 1.000 tons of alloyed steel per month (or from 10 to 15.000 tons per year).
- g. "Right next to these steel mills but outside the rectangle there is a cold mill plant with a production capacity of 5 to 10 tons per day of nuts, bolts and rivets-this cold mill, although perfectly equipped, has never been operated.
- h. "Near the steel mills there is a large unused piece of land which would be ideal for the installation of a large foundry.
- i. There is a force with two presses one of 1.500 tons and the other of 600 tons pressure power, and several small capacity presses. The force is equipped with a heavy harmer and with all the force tools required. It has also a laboratory, a specially equipped department for the making of springs, and a small machine shop. It has finally a heating treating department.
- j. *Behind the forge and after an adequate empty space there is located the machine shop building fully equipped with the following up to date machines:
 - Lathes, of all dimensions including large ones measuring ,6 to 12 meters from point to point, turning lathes, turret lathes etc.
 - Complete set of rilling machines, shapers, radial drill presses and machine drills, bores, shearing equipment and 4 planing machines with working capacity of 6 to _! meters.
- k. The machine shop has also a heat treating department, a galvanising department and a testing department all fully equipped. This last comes from the pre-war Zeiss factories.
- "Finally there are adequate administrative offices including a special drawing room for the engineers, located in the machine shop building.
- m. "All the above machines and installations are up-to-date and well taken core of.
- n. "Few, if any, installations could be found in Europe comparable in their present conditions to the Kirikkale factories for the war purpose they were originally planued for.

٠,	after the transfer of these factories			
	the Makine ve with a normal peace industries program, a large	·Kar	Jana Brat	CONSTRUCTION
